

Press Release

Not the Same Old Stuff

Unified Screening & Crushing will be exhibiting new products at this year's AGG 1 Aggregate Academy and Expo in San Antonio TX.

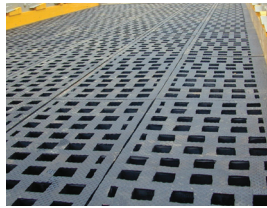

Of course they will also have their Wire Cloth, Polyurethane and Rubber screening media and Crusher Wear Parts, but they will also be showing some new things that Quarries and Mines have been seeking, to help increase their plant productivity.

Crusher Wear Parts

Polyurethane

Rubber

Wire Cloth

Some of Unified's new products include:

Magnetic Pipe Patches made of polyurethane. These offer a quick way to temporarily fix a broken pipe...to keep production running until permanent repairs can be made later. The Pipe Patches are reusable and manufactured with a 1 3/8" nominal thickness of urethane. The magnetized "patches" come flat or curved for any required length...they hold well, regardless of water or slurry pressure.

Pipe Patches

New OEM Screen Rail Profiles are now offered in Double-faced Steel, Full-faced Rubber / Polyurethane Clad.

Screen Rails

Portable Miniveyors, a modular conveyor system capable of moving 20 Tons per hour is available in 15" and 20" widths, with connecting lengths of 10' or 15' sections each. This system is durable and designed for flexibility in confined space areas.

These new products are all part of the Unified Screening & Crushing commitment to products developed through customer and jobsite inspiration.
