

# "Tufflex™ wire more than doubled our wear life."

— Mike Strom, quarry supervisor  
Kraemer Mining & Materials  
Burnsville, MN

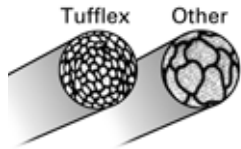

**"Half the change-outs. Half the overtime. Half the cost of stainless steel."** That's what Tufflex™ woven wire screens did for Kraemer Mining & Materials. Kraemer was replacing screens on their 6' x 18' single-deck PEP screens as often as every two weeks. Switching to Tufflex wire from Unified® Screening & Crushing gave the Kraemer operation the longer wear life they needed.

Tufflex wire is manufactured with a proprietary process that creates a higher tensile strength. Elongated, fine grains in the wire decrease surface rust and corrosion. **Tufflex wire provides more ductility and is less susceptible to breakage.**

*Tufflex Wire Screening Media.*

Mike Strom says "Tufflex screens cost about as much as high-carbon wire, but deliver much greater savings on change-out expenses. When it was time for our seasonal change-out, we kept the same Tufflex screens. They still looked good and performed very well."
